

Java Script

What is it ?

Why this popular ?

JS

[Don't Miss It]

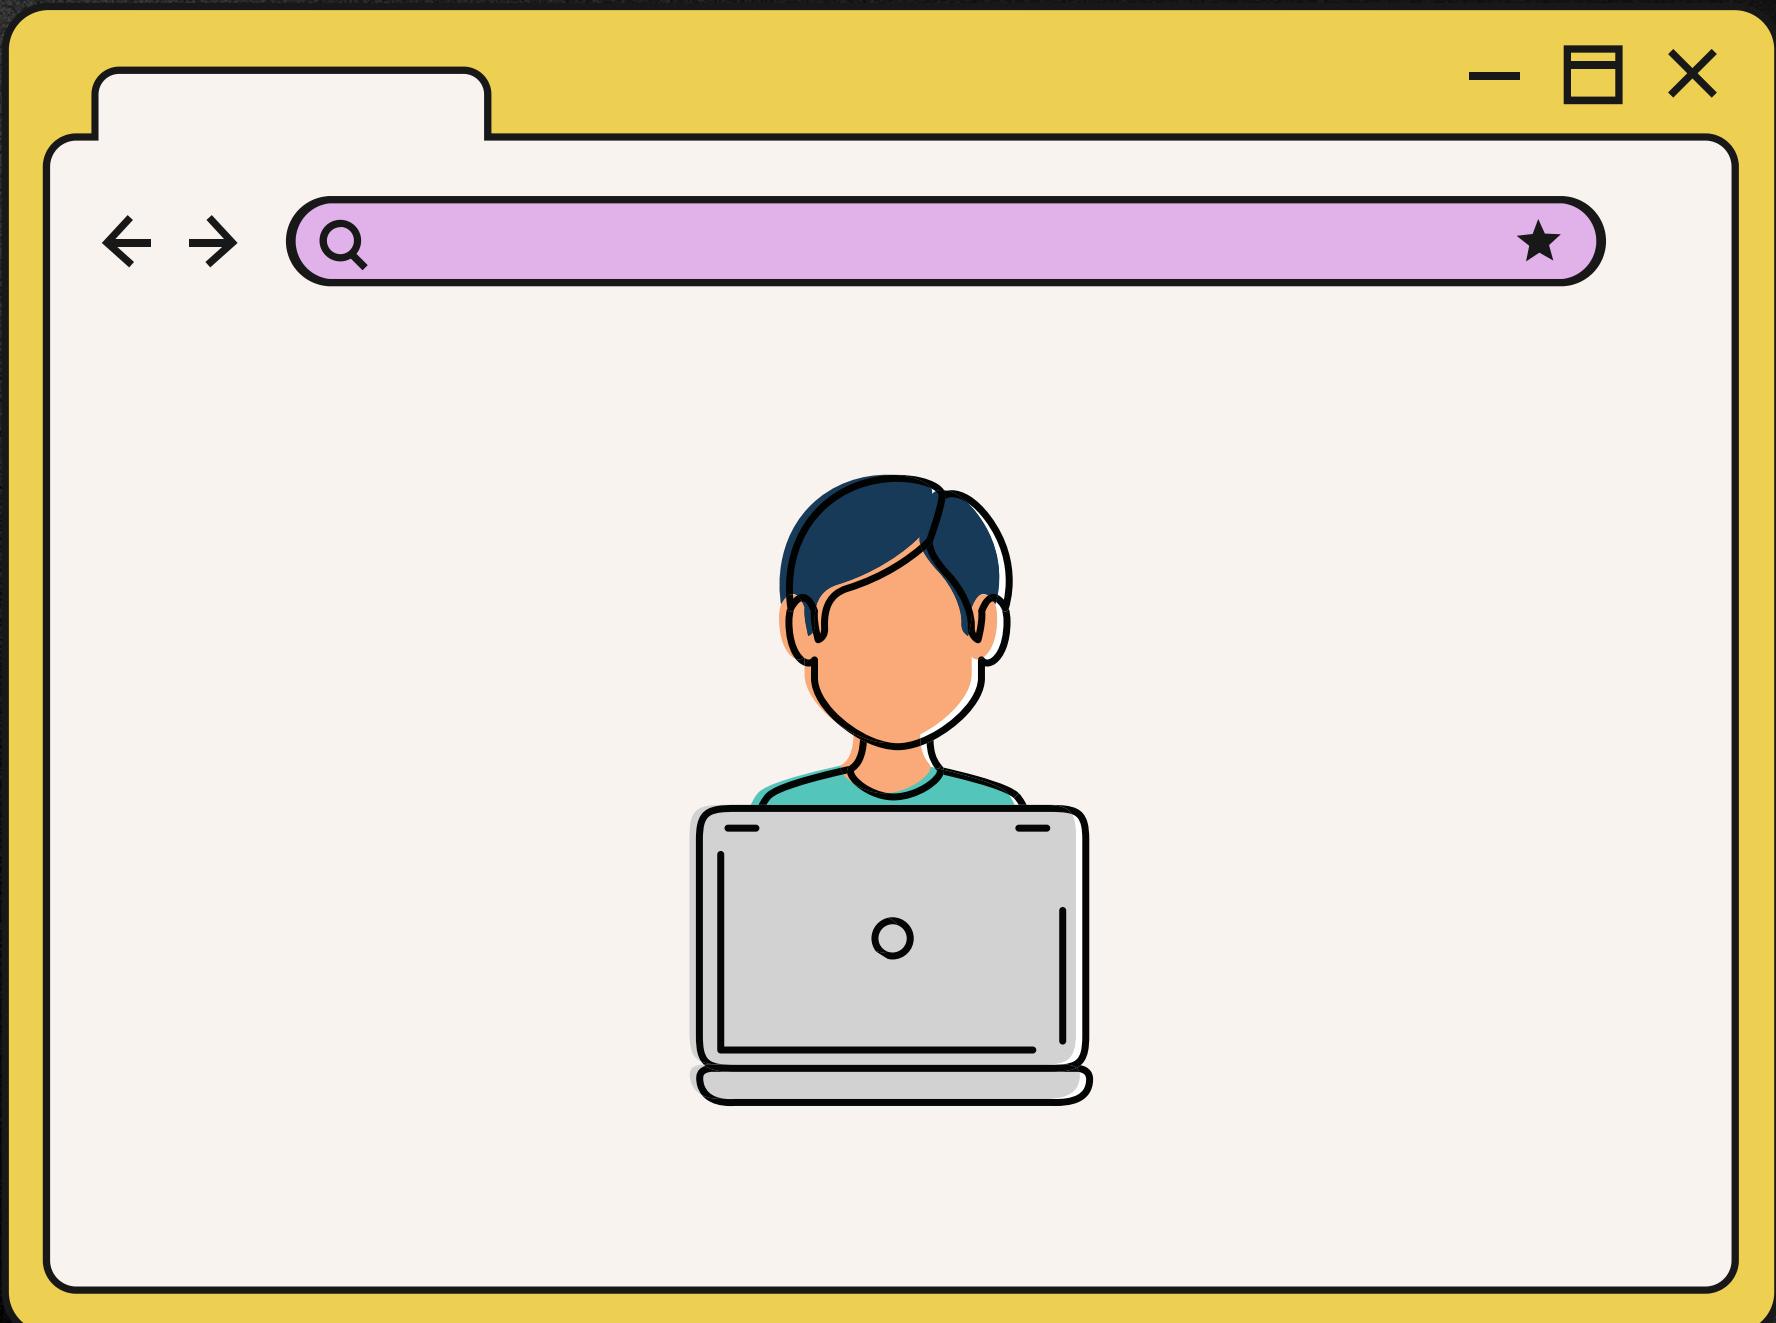

JavaScript is a programming language that is widely used in web development

As of November 2023, 98.8% of websites use JavaScript as a client-side programming language, which shows its increasing popularity. 30 Nov 2023

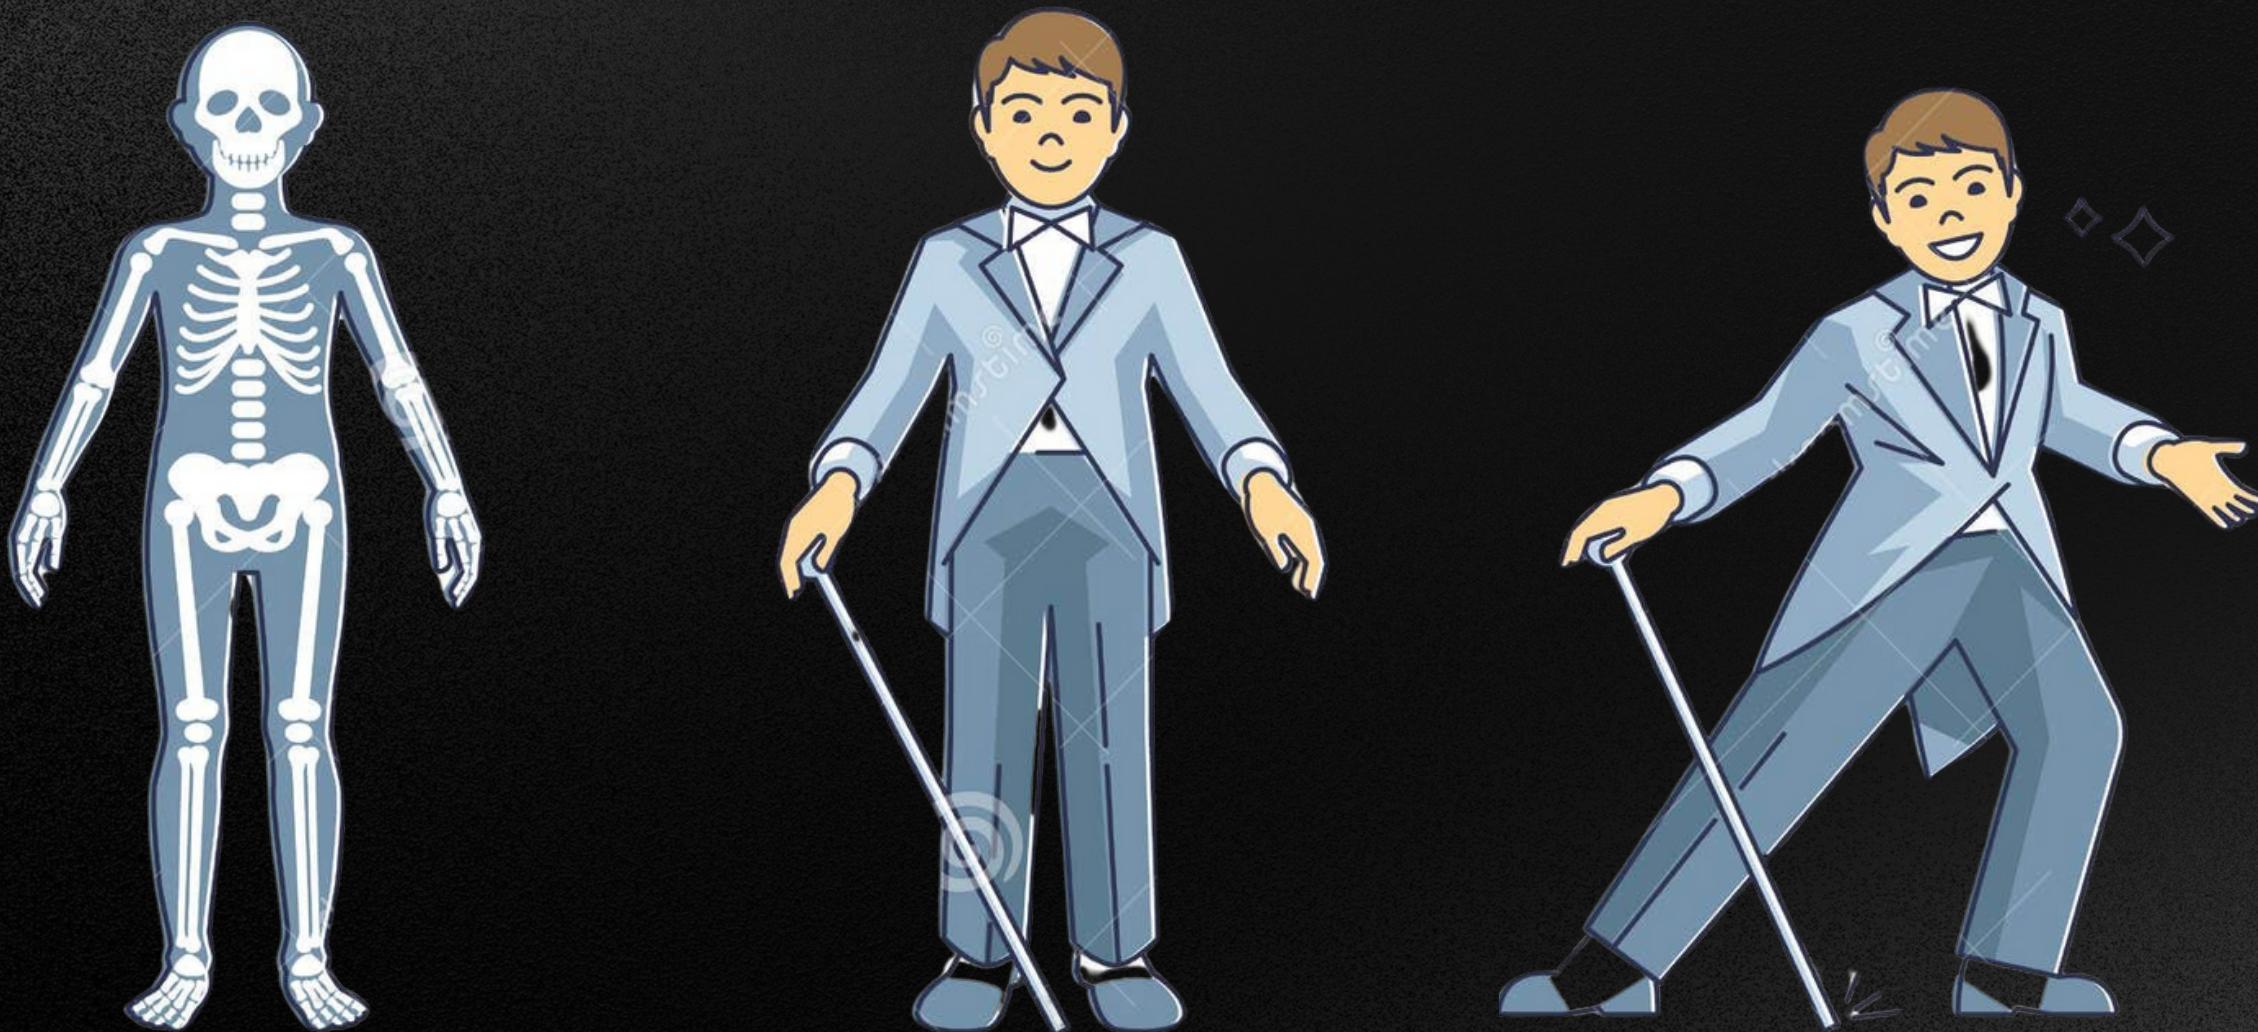

What is Client Side ?

Things that are done inside the browser of the user

JavaScript gives life to a static web pages that has only HTML and CSS

JavaScript is used to add functionality to websites, such as handling user events

Clicks and form submissions, animating page elements, and making asynchronous requests to servers.

Usage varies from creating simple scripts that add simple interactivity to websites to complex single-page applications.

How to Add JavaScript into HTML ?

On Page Script :

```
HTML  
<script type="text/javascript"> . . . </script>
```

Include External JS File :

```
HTML  
<script src="filename.js"></script>
```
